The easiest way to get up and GO!

NEW! Now you can convert your own favorite reliner into a Lift Chair (That should get a rise out of you!)

Wow! Now the recliner that Dad refuses to part with can be transformed in minutes to a safe, efficient, effective Lift Chair. This is the Industry's only "Universal Lift Frame," attaching to the bottom of a favorite recliner to lift and tilt and ease you up like a traditional lift chair--in fact, this Lift Frame uses the exact same motor and lifting mechanism as regular lift chairs. Lifts 350 lbs., plus the weight of the chair, and works on most standard recliners except for swivel--won't damage or interfere with the existing functions of your recliner. Quiet operation. As easy as 1-2-3 to install, the Lift Frame ships fully assembled via UPS. Components quickly disconnect when lift function is no longer needed. 4"H x 29"L x 30"W.

Do not use with swivel recliners. When raising or lowering any lift chair, make sure no objects, including children and pets, are underneath or near the chair.

Remote included
